

# *Gate, Globe & Check Valves*

ASME Class 150 to 4500 |  $\frac{1}{2}''$  to 42'' (15 mm to 1050 mm)  
ASME B16.34

L&T Valves Limited (Formerly Audco India Limited) is a wholly owned subsidiary of Larsen & Toubro. Backed by an fifty-year track-record of excellence and world-leading innovation, the company provides engineered flow-control solutions for key sectors of the economy such as oil & gas, power, petrochemicals, chemicals, fertilizers and pharmaceuticals.

**Product Range:**

- Gate, Globe & Check Valves
- Valves for Power
- Pipeline & Process Ball Valves
- Triple-offset Butterfly Valves
- Flanged & Wafer-type Butterfly Valves
- Double Block and Bleed Plug Valves
- Control Valves
- Customised Solutions

Valves are designed by an experienced team of valve experts who have a deep understanding of user-industry processes. An extensive manufacturing and quality assurance infrastructure ensure that world-class designs are transformed into high performance products. Every phase of manufacture is governed by an institutionalised environment, health and safety policy.

L&T Valves distribution network spans the globe, partnering some of the largest valve distribution companies in the world. In India, L&T Valves has a presence in every industrial centre through a network of offices, stockists, automation centres and service franchisees.

## Gate, Globe & Check Valves

L&T Valves manufactures a comprehensive range of Gate, Globe & Check Valves (GGC) in sizes up to 42" (1050 mm) and in ASME classes from 150 to 4500. The valves are offered in combination of size, pressure class, material, end-connection, etc., to suit myriad applications in power and hydrocarbon sectors.

	4500	•	•	•	•	•	•	•	•	•	•

### Compliance Standards

L&T Gate, Globe & Check Valves are designed in accordance with key international standards. They also meet the requirements of major power and oil & gas industry standards and customer specifications.

Parameter		Standard	
Design	Gate Valves	ASME B16.34	API 600
	Globe Valves		BS 1873
	Check Valves		BS 1868
Ends	Face-to-face/ End-to-end Dimensions	ASME B16.10	
	End Flange Dimensions	ASME B16.5	
	Butt-weld End Dimensions	ASME B16.25	
	Forged Fittings, Socket welding & Threading Dimensions	ASME B16.11	
Testing		MSS SP-61 or API 598	

### Materials of Construction

The product portfolio encompasses valves in carbon steel, stainless steels and alloy steels, in cast and forged materials, in a number of trim options - suitable for line-fluids ranging from low temperature hydrocarbon to super-critical steam.

Material Classification	Body Materials	
	Cast Steel	Forged Steel
Carbon Steel	ASTM A 216 Gr. WCB/ WCC	ASTM A 105
1½ Cr - ½ Mo	ASTM A 217 Gr. WC6	ASTM A 182 Gr. F11 Cl. 2
2½ Cr - 1 Mo	ASTM A 217 Gr. WC9	ASTM A 182 Gr. F22 Cl. 3
5 Cr - ½ Mo	ASTM A 217 Gr. C5	ASTM A 182 Gr. F5a
9 Cr - 1 Mo	ASTM A 217 Gr. C12	ASTM A 182 Gr. F9
9 Cr - 1 Mo - ¼ V	ASTM A 217 Gr. C12A	ASTM A 182 Gr. F91
Low-temperature Steel	ASTM A 352 Gr. LCB/ LCC	ASTM A 350 Gr. LF2
Austenitic Stainless Steel 18-8 (Type 304)	ASTM A 351 Gr. CF8	ASTM A 182 Gr. F304
Austenitic Stainless Steel 16 Cr - 12 Ni - 2 Mo (Type 316)	ASTM A 351 Gr. CF8M	ASTM A 182 Gr. F316

\*Valves in other materials available on demand

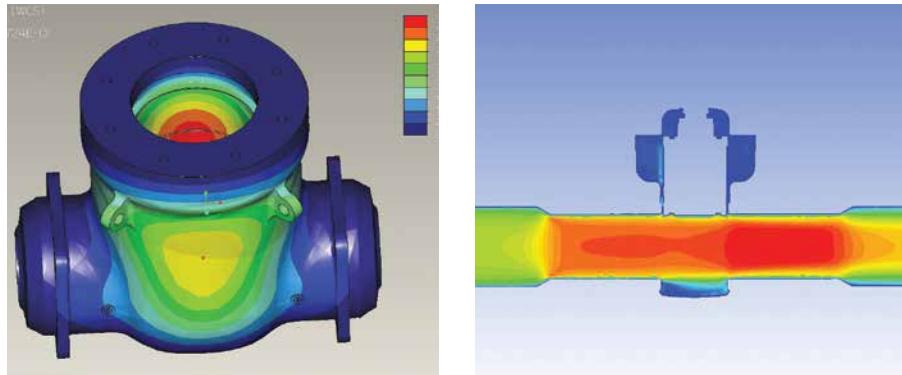

### Trim Materials

API 600 Trim	Materials			
	Stem	Seat Surface	Disc Surface	Back Seat
1	13% Cr	13% Cr	13% Cr	13% Cr
2	SS 316	SS 304	SS 304	SS 316
5	13% Cr	HF	HF	13% Cr
8	13% Cr	HF	13% Cr	13% Cr
9	Monel	Monel	Monel	Monel
10	SS 316	SS 316	SS 316	SS 316
12	SS 316	HF	SS 316	SS 316
16	SS 316	HF	HF	SS 316

\*Other trim combinations available on demand

Designs for L&T Gate, Globe & Check Valves are created in a 3D environment using the latest design and analysis software. Finite Element Analysis (FEA) and Computational Fluid Dynamics (CFD) are extensively used to fine-tune product designs.

## R&D

### In-house Qualification Test Facilities:

- High temperature gas test
- Endurance & Cycle tests
- Seismic qualification tests
- Pipe-end load test
- Vacuum test
- Fugitive Emission Test

L&T Valves design team brings with them a deep understanding of user industry practices. This has aided development of valves in intermediate pressure classes such as 3100, 3500 and 4100 as well as specialized flow-control devices for the power industry.

**At L&T Valves facility in Coimbatore, two pressure-seal gate valves (20 inch class 3100 Special WCC and 6 inch class 3100 Special C12A) were subjected to High Temperature High Pressure Gas Test under simulated super-critical power plant operating conditions.**

**The valves were cycled at high temperature and pressure and the integrity of the pressure boundary as well as seat integrity was successfully established at ambient condition, at elevated temperature and pressure, and at re-ambient condition.**

<b>Test Parameters / Conditions :</b>	
Test Fluid - Nitrogen gas	
Gas Test Pressures at Temperatures	443 bar at 194°C - Allowable Leakage Rate: 90 col/min 518 bar at 150°C - No Pressure Drop Allowed 588 bar at ambient - Allowable Leakage Rate: 9 col/min
Mechanical Cycles	5 Cycles at 535 bar (Ambient) - No Pressure Drop Allowed 5 Cycles at 443 bar (194°C) - No Pressure Drop Allowed
<b>Conclusions / Remarks :</b>	
The above valve test has been witnessed and found to be acceptable as per test procedure	
	

Quality

Commitment to customer satisfaction forms the foundation of L&T Valves quality management system. The QMS is certified to comply with ISO 9001: 2008 and CE PED/ 97/ 23/ EC. The QMS is also approved by the global majors in power and oil & gas domains.

## Manufacturing

L&T Valves has three modern manufacturing facilities, in Chennai (Manapakkam), Coimbatore and Kancheepuram, in Tamil Nadu, India. The plants are designed for manufacture of complex large-size valves as well as high volume production of smaller valves.

### Facilities:

- 5-axis Machining Centres
- CNC VTLs with table dia up to 4m
- CNC Rotary Surface Grinding Machines
- SMAW, MIG, Plasma Arc Welding Machines, table dia 60"
- EOT Cranes of capacity 40 tons

Occupational health and safety as well as environmental protection are accorded prime significance and guide all aspects of manufacturing at the plant. L&T Valves plants are zero discharge units and are pioneer in green initiatives.

## Gate, Globe & Check Valves - ASME Class 600 to 4100

L&T high pressure range of gate, globe & check valves conform to ASME B16.34. The valves are of pressure-seal design and have innovative features that enhance performance and plant safety. The valves can be supplied with IBR certification.

### Pillar-yoke Construction

L&T gate and globe valves are of pillar-yoke construction, where the yoke plate is connected to the body using steel pillars. This construction enables easy access to bonnet and gland packing for maintenance. Further, since the yoke is directly mounted on the body, unbalanced thrust does not compromise valve performance.

### Pressure-seal Body-bonnet Design

In this design, line pressure is used to create a high integrity body-bonnet seal - the higher the pressure, the better the sealing. The bonnet is held in place by a split-retainer and pre-loaded against it using the bonnet bolts and retainer plate. This arrangement provides tight seal at low pressures also.

### Welded Seat Ring

In gate and check valves, seat rings are seal-welded to the body. This eliminates leakage path between seat ring and body as well as accidental loosening due to temperature fluctuations or vibrations.

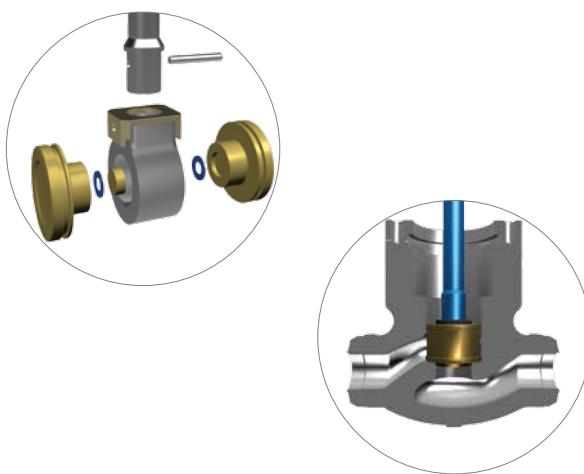

### Full-bore Design

For gate valves, the standard product offering is full-bore as per ASME B16.34. Higher wall thickness and enhanced flow parameters are the characteristics of this design. Gate valves are offered in reduced-bore design also.

### Parallel-slide Disc

The disc mechanism comprises two independent discs, a disc carrier and Belleville springs. The disc faces are parallel to each other and the springs keep the discs loaded against the body seats. Sealing occurs when line pressure forces the disc against the downstream seat.

Parallel-slide discs are position-seated and operating torques are considerably lower in this design. This design also eliminates chances of disc-jamming due to thermal binding.

### Hard-faced Trim

Disc, seats and back-seat (for gate and globe valves) of high pressure valves are hard-faced with Stellite 6 or equivalent. As a standard, the valves are offered with a hard-facing thickness of 3 mm to ensure long and trouble-free service life.

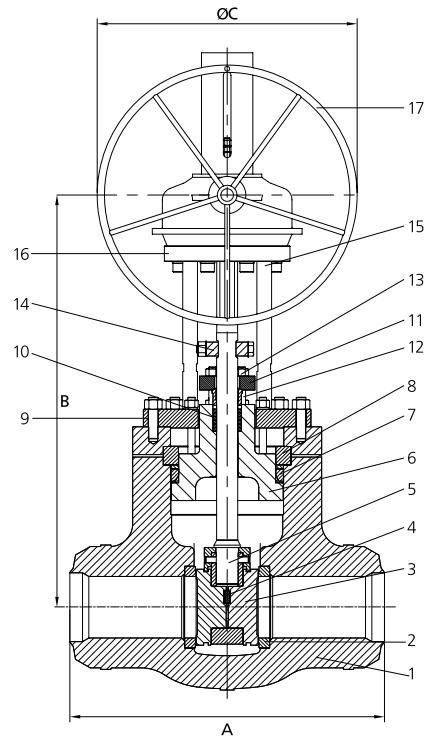

### Globe Valves - Insitu Seat & Body-guided Disc

High pressure globe valves have integral seats that are machined and hard-faced insitu to improve wear resistance.

The discs of L&T globe valves are guided during opening/ closing to minimise effects of side thrust and this prevents seat damage.

## Gate Valves - ASME Class 600 to 4100 (ASME B16.34)

L&T gate valves in classes ranging from 600 to 4100 conform to ASME B16.34. The valves feature a high integrity pressure-seal body-bonnet connection and are of pillar-yoke construction. The parallel-slide disc is another innovative feature of this range.

## Globe Valves - ASME Class 900 to 4100 (ASME B16.34)

L&T manufactures high-pressure globe valves in ASME classes ranging from 600 to 4100. These valves conform to ASME B16.34 and feature a pressure-seal body-bonnet connection.

## Globe – Disc Options

Globe valves are supplied with customised discs with complex profiles to produce specific flow characteristics.

### Tapered Disc (Quick-opening Disc)

We offer the Tapered Disc design as a standard. In this design, when the valve is opened, close-to-maximum discharge is obtained very quickly. These valves are used in services that require quick opening.

### Special Profile Discs

- Linear Characteristic Disc
- Equal Percentage Disc

## Check Valves - ASME Class 900 to 4100 (ASME B16.34)

L&T's high-pressure check valves are of pressure-seal design. As a standard, these valves are supplied with internal hinge-pins.

All dimensions in mm and weights in kg. Dimensions of valves in ASME Classes 3500 & 4100 available on demand

Check valves of size 20" and above in class 600 are offered in pressure-seal design. Please contact us for further details

### Ordering Information

Series	Type	Class	Ends	API Trim
L	H - ASME B16.34 Gate	6 - 600	B - Butt-weld	5 - Trim 5
	Q - ASME B16.34 Globe	9 - 900		8 - Trim 8
	S - ASME B16.34 Check	A - 1500		12 - Trim 12
		B - 2500		16 - Trim 16
		C - 3100		
		D - 3500		
		E - 4100		
		F - 4500		

Check Valves can be offered with dashpot arrangement based on customer demand.

High pressure gate valves can be supplied with a variety of arrangements to equalize upstream and downstream pressures. Typically globe valves are used as bypass valves.

Further, to prevent centre cavity over-pressurization, the cavity is connected to the upstream side of the valve. This connection may be done with or without a pressure equalizing valve.

Requirement of bypass and cavity relief arrangement is to be specified by the user. (For guidance on center cavity relief, Refer ASME B16.34, Clause 2.3.3)

#### Type 1:

The upstream and downstream sides of the valve are connected by a bypass pipe fitted with a globe valve. The gate valve is bidirectional.

#### Type 2:

There is an additional connection between centre cavity and upstream for cavity relief. The gate valve is unidirectional.

#### Type 3:

In this arrangement, the centre cavity is connected to a bypass pipe. Globe valves are provided on the downstream side and the connection between centre cavity and bypass. Entrapped fluid is relieved using the centre cavity valve. The gate valve is unidirectional.

#### Type 4:

The arrangement consists of a connection between the centre cavity and a bypass pipe, with one valve each on the upstream and downstream of the bypass pipe. Based on the flow direction, one valve can act as bypass valve and the other, as a pressure equalizing valve. The gate valve is thus bidirectional.

#### Type 5:

An additional valve is provided on the connection between the centre cavity and the bypass pipe. The gate valve is bidirectional.

### **Bellow Seal Valves**

Bellow Seal Valves are used in services where leakage through stem packing area needs to be eliminated. These valves find application in lines handling hazardous fluids in nuclear and thermal power as well as hydrocarbon industries. The bellows conform to MSS SP 117 and can be offered in stainless steel, Inconel or Hastelloy.

### **Reheater Isolating Device**

Reheater Isolating Device (RID) is used to isolate reheater lines during hydrostatic tests. The device has a disc that can be inserted from the top between hard-faced seat rings to effect sealing. After hydrostatic tests, the disc is removed and the device effectively becomes an integral part of the piping. RID eliminates the need to physically isolate lines during tests.

The body-bonnet connection of this device is of pressure-seal design.

### **Quick Closing Non-return Valve**

Quick Closing Non-Return Valves (QCNRV) are swing check valves where quick closing is achieved using special actuation mechanisms. These are used to protect turbines and compressors from damage due to back flow.

### **Vacuum Service Valves**

Vacuum Service Valves are offered in a variety of sizes and pressure classes. Stem finish and integrity of gland packing are crucial for these valves. The valves can also be offered with lantern-ring arrangement based on customer demand.

### **Angle Globe Valves**

In Angle Globe Valves, the inlet and outlet are at right angles to each other. These valves find application in lines where pipe configuration or pressure drop is a concern.

Angle Globe Valves can be offered in pressure-seal as well as bolted bonnet designs based on line pressure.

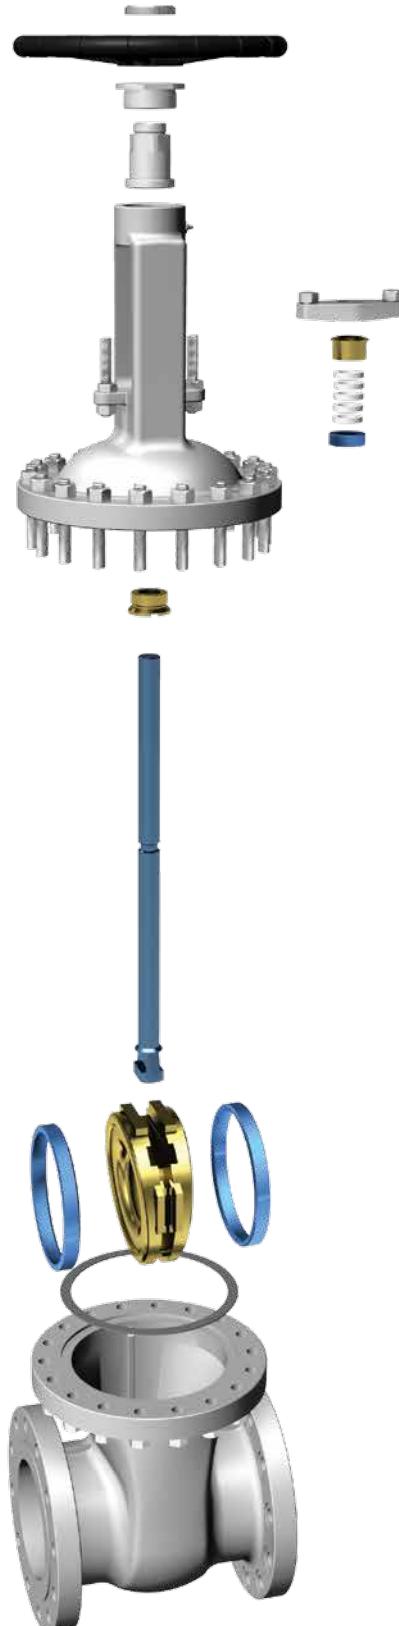

### **Accessories**

L&T Gate, Globe & Check Valves are supplied with a range of accessories to address process and plant requirements.

- Electric, Pneumatic and Hydraulic Actuators
- Position Indicators
- Extension Spindle
- Gear Units
- Locking Arrangement
- Live Loading

## Gate, Globe & Check Valves - ASME Class 150 to 600

L&T offers a versatile range of cast steel gate, globe and check valves in bolted bonnet construction. The gate and globe valves are of outside screw-and-yoke design. The check valves are swing-type. This range is available with flanged and butt-weld ends and can be supplied with IBR certification.

### **Stem**

Single-piece forged stems are used in gate and globe valves for superior strength. In a gate valve, the forged T-head engages with a slot in the disc. The globe valve disc is fitted to the stem using a disc nut, which allows the disc to swivel and align with the seat.

### **Disc**

Gate valve discs are of single-piece cast flexible wedge design. In these torque-seated valves, the flexible wedge compensates for seat distortion and eliminates disc-jamming.

### **Seat**

In gate and check valves, seat rings are seal-welded to the body. This eliminates leakage path between seat ring and body as well as accidental loosening due to temperature fluctuations or vibrations.

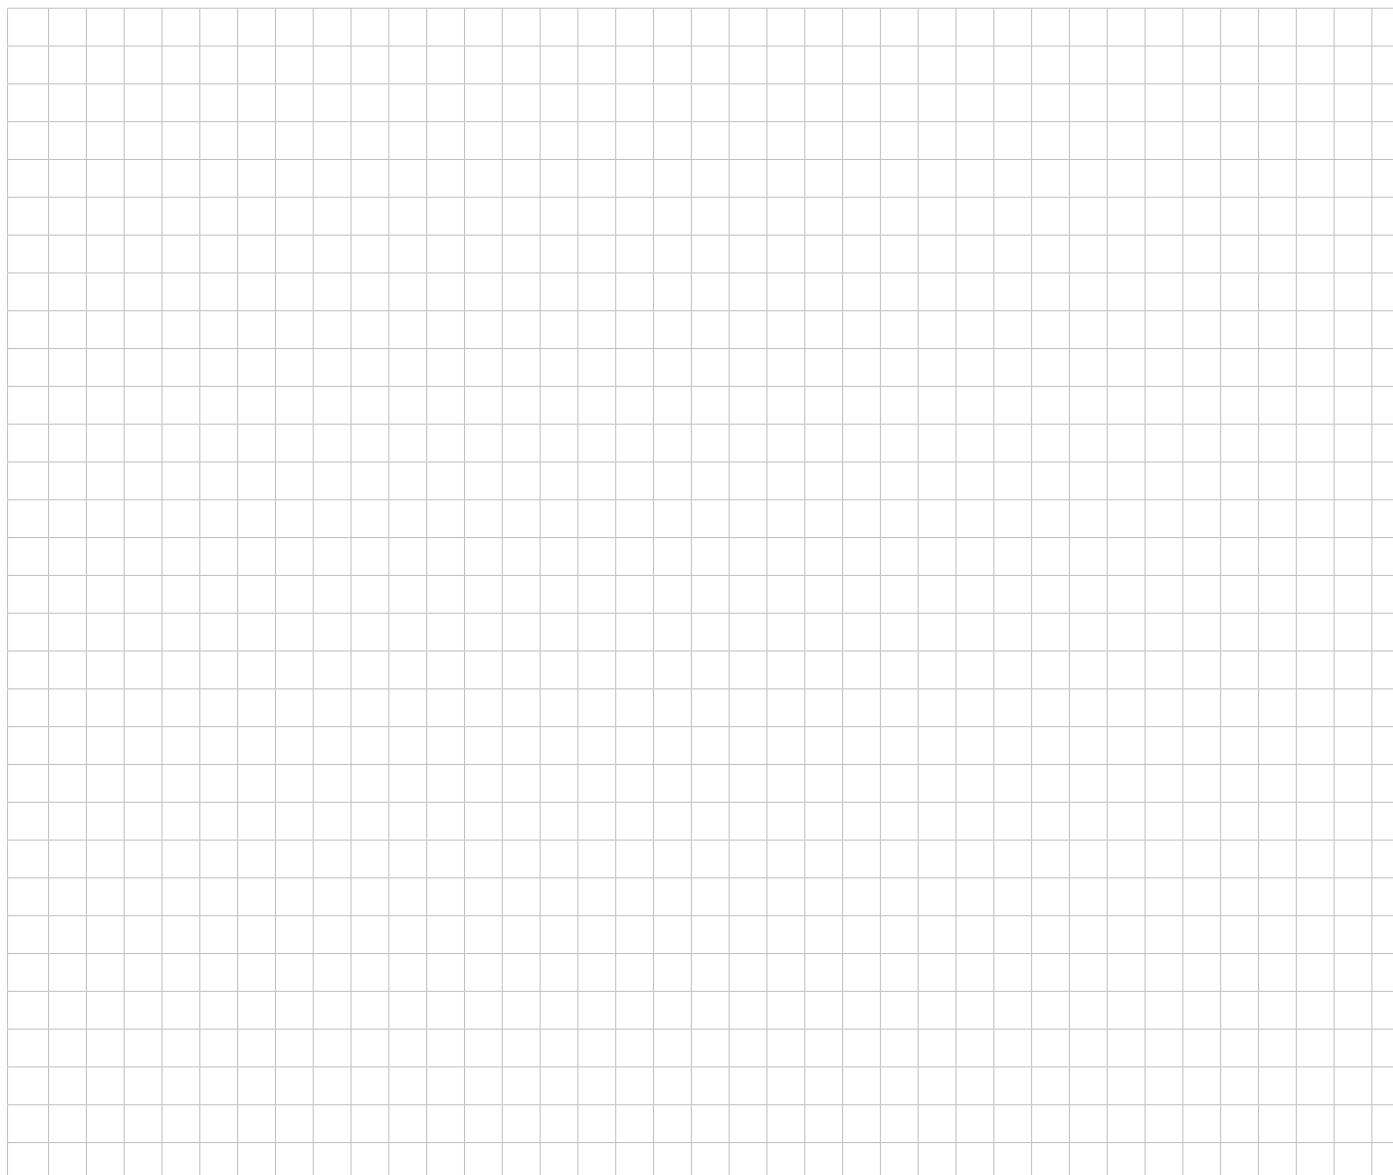

### **Body-bonnet Joint**

Class 150 gate valves in sizes 3" and above are offered with oval-shaped body-bonnet joints. As a standard, 2" gate valves as well as globe and check valves have circular body-bonnet joints.

L&T Gate Valves of size 20" and above in ASME class 600 are offered with pressure-seal bonnet and pillar-yoke design as a standard. Please refer page no. 11 for dimension details of valves 20" and above.

## Globe Valves - ASME Class 150, 300 & 600 (BS1873, ASME B16.34)

L&T Globe Valves with bolted bonnet and plug-type disc are available in ASME classes 150 to 600.

Up to 12", the valves are offered with flanged and butt-weld ends, above which butt-weld end is the standard.

## Check Valves - ASME Class 150, 300 & 600 (BS1868, ASME B16.34)

L&T Check Valves with bolted cover, swing-type disc and internal hinge are available in ASME classes 150 to 600.

The valves are offered with flanged and butt-weld ends in sizes up to 24", above which butt-weld end is the standard. Valves are also offered with dashpot arrangement based on customer demand.

All dimensions in mm and weights in kg

L&T Check Valves of size 20" and above in ASME class 600 are offered with pressure-seal cover design as a standard. Please contact us for dimension details

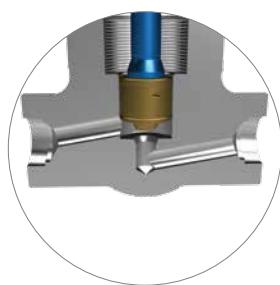

## Forged Steel Globe & Check Valves - ASME Class 1500, 2500 & 4500 (ASME B16.34)

L&T forged steel globe and check valves in sizes up to 2" complement the high pressure gate, globe and check valves range. The T-pattern valves are IBR-certified and are available in a variety of materials.

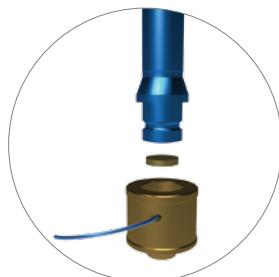

### Body-bonnet Connection

The body-bonnet connection of these valves is of threaded construction. To enhance the seal, the body-bonnet joint is seal-welded.

### Stem-disc Assembly

The disc of a globe valve is connected to the stem using a wire inserted through a hole in the disc. This unique stem-disc connection enables the disc to rotate freely on the stem, align perfectly with the seat and produce a tight seal.

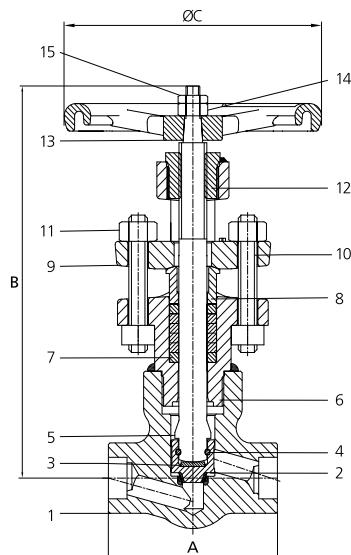

### Seat and Disc

Forged steel valves have integral seats that are machined and hard-faced insitu for longer service life. As a standard, the valves are offered with 3 mm hard-facing.

The discs are guided during opening/ closing to ensure proper sealing and to minimize seat damage.

## Forged Steel Globe Valves - ASME Class 1500, 2500 & 4500 (ASME B16.34)

Height of raised face is 2 mm

### Butt-weld Ends as per ASME B16.25, 2012 (Welding end detail for joint without backing ring)

For wall thickness less than 22 mm (0.88").

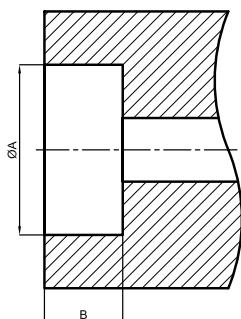

For wall thickness greater than 22 mm (0.88").

Note : Internal surface may be reformed or machined for dimensions B at root face.  
Contour within the envelope is manufacturer's option, unless otherwise specifically ordered for.
